Integrated Research Input & Output System (IRIOS-2) – An Overview

Kevin Ginty[a], Simon Kerridge[a], Josh Brown[b], Paul Fairley[a],
Valerie McCutcheon[c], Anna Clements[d]

[a] University of Sunderland, UK; [b] JISC, UK;
[c] University of Glasgow, UK; [d] University of St Andrews, UK

IRIOS will support RCs and HEIs to collaboratively maintain grant records, and for HEIs to collaborate at a finer-grained level in research funding applications; a business-to-business platform supporting the maintenance and exchange of grant and output information.

The IRIOS proof-of-concept demonstrator fundamentally provides most of this functionality, however some adaptation will better support a wider range of outputs. IRIOS-2 will work closely with the CERIF In Action (CIA) project (led by St Andrews) to ensure consistency of approach and to remove duplication of effort across the sector.
