

Close the gap

The importance of research information systems is growing - worldwide. More and more software manufacturers are scenting the big business. More and more institutions are going "live". In addition to meeting the ministerial reporting needs, the external presentation of research activities and research results is often a major goal for research institutions.

However, many points fall by the wayside with standard mode go-lives. A research information system only creates added value and a competitive advantage for researchers and institutions when

- if it is fully integrated into the (strategic) processes,
- the data in the FIS is of an appropriate quality,
- data flows are fully automated
- the external presentation of research services focuses on the institution itself and not on the product behind it
- if it has the necessary acceptance and usage rate within the institution.

To find and close the gaps in the CRIS environment is crucial. It makes the difference between a simple CRIS software installation and a real solution for a research institution.

Closing the gap, adding value. This makes AT-CRIS services unique. Worldwide.

This is AT-CRIS

AT-CRIS was founded in April 2016 and is located in Karlsruhe, Germany and in Aalborg, Denmark. Being the first product independent CRIS consulting and implementation partner, AT-CRIS is working for universities, research institutions and software providers globally.

With the product independent preparation service "Fit for CRIS", the comprehensive implementation service to relieve universities and research institutions of the burden of introducing a system - irrelevant which system has been decided for, the 3rd mission or the 360°CRIS review service - AT-CRIS helps its customers to close the gap to have a better solution in place.
