New Research Support Roles for University Libraries

Pablo de Castro

euroCRIS Secretary

Open Access Advocacy Librarian

University of Strathclyde

pablo.de-castro@strath.ac.uk

<http://orcid.org/0000-0001-6300-1033>

Talk structure

- Introduction: speaker's affiliation(s)
- Research Information Management: Why
- CRIS Systems in Latin America: a distinct landscape
- CRIS Systems and Interoperability with OpenAIRE/Repositories
- Are Next Generation Repositories CRIS Systems?

Speaker's academic affiliation(s)

U Strathclyde in Glasgow – OA Advocacy

- Established 1796 as “the place for useful learning”
- 22,295 FTE Students and 3,200 staff (2017/18)
- Research: research grants and contracts income of £65.6m in 2017*
- Among the 20 top research-intensive universities in the UK

* 14.5% increase from previous year and an overall increase of over 60% over a six year period

Previously

- OpenAIRE2020 WP coordinator at LIBER (Assoc of European Research Libraries) in The Hague, the Netherlands
- EDINA National Data Centre, University of Edinburgh, UK
- Consejo Superior de Investigaciones Científicas (CSIC), Universidad Carlos III Madrid (UC3M), Spain

Speaker's academic affiliation(s)

euroCRIS Technical Secretary

- Non-profit based in the Netherlands
- Association of practitioners in the area of Research Information Management (RIM) and CRISs
- 175 institutional members with over 340 representatives,
<https://www.eurocris.org/community/members>
- Custodian for the Common European Research Information Format (CERIF)
- MoUs with several relevant organisations in the RIM domain – such as OpenAIRE, ORCID, COAR, CONCYTEC

euroCRIS: promoting the use of CERIF

Mission

"To promote collaboration within the research information community and advance interoperability through CERIF"

Main features of CERIF

CERIF (the Common European Research Information Format) is:

- A concept about research entities and their relationships – Specification (Conceptual Level)
- A description of research entities and their relationships – Model (Logical Level)
- A formalization of research entities and their relationships – Database Scripts (Physical Level)

Simplified CERIF model

The Role of Current Research Information Systems (CRIS) in Supporting Open Science Implementation: the Case of Strathclyde

Pablo de Castro

Abstract

CRIS systems are playing an increasingly relevant role in the implementation of Open Access and Research Data Management (RDM) policies at research-performing organisations. This is not just because of the deep insight these systems provide into the workflows that underpin the institutional research activity, but also because they allow an effective teamworking across institutional research support units, which critically include research libraries.

This article describes the way the institutional Pure CRIS is used at the University of Strathclyde in Glasgow to support the implementation of Open Science in collaboration with the researchers themselves and with the institutional Research Office. In terms of training, which is in itself an important and often challenging part of the effort towards Open Science implementation, the key objective is to make researchers aware that all the seemingly independent processes they're being asked to carry out on top of their research activity are interconnected and are part of the same drive towards openness and digital science.

Finally, the paper describes the international collaboration networks for the realisation of Open Science that the University of Strathclyde is involved in and some of the areas where this cross-institutional collaboration is taking place.

Commercialisation of non-invasive wound monitoring system leads to quality of life benefits to patients.

Summary of the impact

As a result of research on moisture sensing, Professor Patricia Connolly developed and successfully clinically trialled a disposable, sterile, moisture sensor which enabled real-time measurement of the moisture level in a wound without disturbing the dressing. Ohmedics Ltd was spun out in 2009 to market the disposable sensor and associated hand-held

CRIS System Landscape

Latin America: a distinct approach?

System Interoperability and OpenAIRE

The quest for research information

Abstract: Nowadays, there is full consensus that the promotion of Science, Technology and Innovation (STI) has a positive impact on the economic growth of a country. In Peru, the National System of STI doesn't have enough information for decision-making, because it doesn't have an information system to manage (collect, systematize, store and communicate) the data generated during execution of each activity carried out. In this context, CONCYTEC (public body in charge of the development of policies, regulations and promotion of activities related to the STI) is planning to build a tool to cover this need, project that has financial support from the World Bank. To fulfill this task in order to cover the needs of all the actors involved in STI in the country, a study was carried out at a national level to know the current state of the processes and the computer supports of the research centers, research institutes and universities of the country to know their needs, and be able to pursue a common goal.

COMUNICADO DE PRENSA

Banco Mundial apoya fortalecimiento del sistema de ciencia, tecnología e innovación en el Perú

Enero 11, 2017

Esta página en: [English](#) | [Español](#)

WASHINGTON, 11 de enero de 2017 - El Directorio Ejecutivo del Banco Mundial aprobó hoy un financiamiento por US\$45 millones para fortalecer el sistema de ciencia, tecnología e innovación (CTI) en el Perú, lo que ayudará a mejorar la productividad en las empresas mediante la innovación de procesos y productos.

El proyecto apoyará el marco institucional del sistema de CTI, buscando hacerlo más integrado, coordinado y eficiente. En particular el proyecto fortalecerá las capacidades institucionales del Consejo Nacional de Ciencia y Tecnología (CONCYTEC), el ente rector del sistema, y apoyará la evaluación de la eficiencia y eficacia de programas como el Fondo Nacional de Ciencia y Tecnología (FONDECYT). Todos los actores institucionales se beneficiarán de asistencia técnica y equipamiento para mejorar sus sistemas de información, monitoreo y planificación.

Call for Papers #PeruCRIS2020

El Consejo Nacional de Ciencia, Tecnología e Innovación Tecnológica – Concytec, se complace organizar y presentar el **II Congreso Nacional de Gestión de la información en CTI**, el cual será realizado en julio del 2020, en el marco del proyecto #PerúCRIS.

Esta segunda edición, presentará algunas novedades con respecto a la edición anterior.

La inclusión de un **Call For Papers**, con el que diversos actores del ecosistema académico-científico podrán compartir los hallazgos y experiencias locales.

Fechas Importantes:

- Envío de artículos hasta el 31 de mayo de 2020.
- Notificación de aceptación: 30 de junio de 2020.
- Fecha de la Conferencia: 16 y 17 de julio de 2020 (fecha tentativa).

Current research information system

From Wikipedia, the free encyclopedia

A **current research information system (CRIS)** is a [database](#) or other [information system](#) to store, manage and exchange contextual metadata for the research activity funded by a research funder or conducted at a research-performing organisation (or aggregation thereof).^[1]

CRIS systems are also known as Research Information Management or RIM Systems (RIMS).^{[2][3]}

Contents [hide]

- [1 Features](#)
- [2 Use case](#)
 - [2.1 Research assessment](#)
 - [2.2 Research administration](#)
 - [2.3 Open Science implementation](#)
 - [2.4 Business intelligence](#)
- [3 References](#)
- [4 Further reading](#)
- [5 See also](#)
- [6 External links](#)

Features [\[edit \]](#)

The data model underpinning a CRIS relies on a set of basic entities as defined by the Common European Research Information Format ([CERIF](#) ) model maintained by the non-profit organisation [euroCRIS](#).

The links connecting these entities provide a standardised semantic layer that provides consistency to the data model. The basic CERIF entities are **people, organisations, projects and outputs** (publications, research data, patents). Further second-level entities in the comprehensive snapshot of research provided by CERIF are for instance funding, research facilities and equipment or skills.

CERIF: The Comprehensive Data Model for Research Information

Entities

- Projects, Organisations, Persons, Funding, Research Outputs, Events, Research Facilities, Equipment, Services, Skills, Prizes, Indicators, ...
- 25 in total

Attributes

- Just the basic ones
- Multilingual free-text ones
- External identifiers (DOIs, ORCID iDs, ROR Ids, ...)

Relationships

- Formalized semantics for the type of relationship
- Generally many-to-many
- Optional startDate + endDate

CERIF Example

MoU euroCRIS/OpenAIRE (May 27th, 2019)

Memorandum of Understanding

Purpose

The purpose of this Memorandum of Understanding (MoU) is to establish and promote a strategic and cooperative partnership between OpenAIRE and euroCRIS.

Objective

The strategic partners will work together:

(a) To realise optimal interoperability between the central OpenAIRE system and CRISs based upon the international standard CERIF exchange format, resulting in:

- An enrichment of the OpenAIRE database with an extended set of additional contextual metadata
- A substantial extension of the kind and number of data providers to the OpenAIRE aggregation, enabling a more complete coverage of the research information domain
- The gradual addition of the research information management community to the group of parties that have a stake in OpenAIRE

Institutional CRIS: a (European) example

Challenges

- Scale and Complexity of Institution
- Unpopularity former system
- High expectations
- Large amount of legacy data
- Different institutional cultures (University vs Developer)
- Rigid processes

Solutions

- Early involvement of stake holders and individual researchers
- Transparency regarding process of implementation and milestones
- Implementation step-by-step (Award Management)
- Heterogenous teams in implementation and management
- Analyze processes and workflows and maybe re-adapt

Institutional CRIS: a (European) example

Pure @ University of Vienna: Responsibilities

Decentral u:cris staff @ University of Vienna

- Validation of publications: ca. 250 persons
- Contact points for initial data entry (publications): ca. 150 persons
- Contact points for initial data entry (research projects): ca. 70 persons

Why University library participation is key

RIM Activities for which the Library Plays a Role (n=172)

FIGURE 32. RIM activities for which the library plays a primary or supporting role

- Cross-institutional collaboration at the heart of what libraries do
- Not so much the case for stakeholders involved in the RIM domain

Mapping the RIM landscape

The OCLC Research-euroCRIS Survey of Research Information Management Practices received 381 survey responses from 44 countries, which demonstrates the global nature of research information management activities.

Respondents by Region (n=381)*

*1 respondent from each of the following countries:

Afghanistan, Albania, Azerbaijan, Barbados, Belize, Brazil, Hungary, Lebanon, Mexico, Namibia, Russia, Saudi Arabia, Slovakia, Sri Lanka, Sweden, Trinidad and Tobago, Turkey, Uganda, United Arab Emirates and Uruguay

** 107 respondents did not provide a country

Mapping the RIM landscape: interoperability

CRIS/IR Survey report

1 Mar 2016

No comment

Johan Bergström

article, CRIS, erai, Featured, report

There was wide participation from the community, and we collected 84 full responses from 20 different countries.

The two main questions the Survey tried to answer were: are CRISs gradually replacing IRs? Are the two systems overlapping in their functionalities? From the results we have collected, both questions seem to get a negative answer. The two systems are clearly complementary: while IRs are the preferred choice for managing research publications and dissertations and thesis, CRISs are regularly chosen for managing the institutional research information as a whole including metadata for research papers.

euroCRIS Directory of Research Information Systems (DRIS)

DRIS

The **Directory of Research Information Systems (DRIS)** is a euroCRIS initiative to map the available research information management infrastructure in Europe (and beyond). As of January 2020 it includes close to 450 CRIS systems for institutions, research funders and other bodies in multiple European countries and beyond.

Name of the CRIS OMEGA-PSIR@WUT **Acronym** OMEGA-PSIR@WUT

Description

OMEGA-PSIR@WUT is the fully functional CRIS operated at the Warsaw University of Technology (WUT). It provides the University Management with a complete view of research achievements of the University, and reports the achievements to the national authorities. It also functions as Institutional Repository, making it possible to archive full-texts, and provides access directly to the users. It is compliant with the OAI-PMH protocol. The system grants end-users access to the files according to the copyright permissions and the users' privileges. For example, for an authorized user a publication can be provided directly from the system, otherwise the system directs the user to the publisher site.

Status In Operation **Scope** University **Date of establishment** 02-01-2013 **URI** <http://repo.bg.pw.edu.pl/index.php/en/>

Number of users 4300 **Annual number of DB requests** 860,000 **Software** Commercial/In-house software

CERIF-Compatibility CERIF wrapped: Non-CERIF storage model but CERIF interface (query and reporting) **CERIF-version** CERIF-1.4

Literature Repository

Run compatibility test against the OpenAIRE literature guidelines.

Data Repository

Run compatibility test against the OpenAIRE Guidelines for Data Archives.

CRIS Systems

Run compatibility test against the OpenAIRE Guidelines for CRIS Managers based on CERIF-XML.

Why making CRIS OpenAIRE-compliant?

- Even if the institutional repository is already OpenAIRE-compliant, it makes sense to implement the CERIF-XML Guidelines on the CRIS for the sake of the *contextual information not included in the repository items*
- Adding *National CRIS* to the range of OpenAIRE data providers may also involve significant benefits in terms of comprehensiveness, esp in countries with weaker repository networks

Efervescencia y desencanto : el joven Félix Frías como demócrata -cristiano- radical

Not really. The NGR initiative is mostly about technical improvement for repository platforms.

However, from a content perspective, the gradual integration / merging of IRs and CRISs is part of the landscape evolution

System interoperability a key concept for Open Science implementation

ABOUT EVENTS FUNDING IWC NEWS PUBLICATIONS RESOURCES

WheatVIVO

The Wheat Initiative is developing an open-access web portal that aims to provide information regarding wheat researchers and international projects.

The WheatVIVO portal will facilitate access to information concerning researchers and research projects amongst the global public-private wheat community. This web portal will be a useful tool for researchers to search for partners in order to develop collaborations. WheatVIVO can also be used by students and post-docs to identify labs in which they would like to work, as well as by policy makers and funding agencies to better understand research priorities in different countries.

INTERNATIONAL WHEAT CONGRESS AWARDEES

FRANCISCA CASTILLO

BIOGRAPHY

My name is Francisca Castillo, I was born in Santiago-Chile. I am 30 years old and I am single mother of a 14 years old son. I studied Biochemistry (2007-12, Best GPA Award) and hold a PhD in Agricultural Sciences at the Austral University of Chile (2013-17). During my PhD, I was supervised by Prof. Daniel Calderini and my research was focused on the physiological and molecular determinants of grain weight in sunflower crop. In parallel, I joined to Prof. Simon McQueen-Mason (UK) and Prof. Calderini's team (Chile) in a project that involved the overexpression of an expansin gene in wheat grains funded by Community Resource for Wheat Transformation of NIAB, UK. In this context, I completed an internship at The University of York, UK (2015). The work that I carried out in wheat during three independent experiments is now bearing fruits in a publication. During my early career, I have

published the results of my PhD thesis as a first author in WoS Journals, and, I presented my research in several national and international conferences. Recently, I was awarded as Principal Investigator a Postdoctoral Project funded by National Commission for Science and Technology (CONICYT-Chile, 2019-2022) entitled: "Functional analysis of a rotamase involved in thermotolerance processes in wheat grains". Currently, my research interests are focused on wheat yield and production under heat stress using Crop Molecular Genetics and Genomics approaches. In the future, my aspiration is to continue contributing to knowledge that improves wheat varieties for growers, industry and consumers.

The challenge:
To be able to provide cross-institutional, international support to researchers with unprecedented mobility

A few conclusions

- Plenty of relevant, new research support tasks waiting for a dynamic library and institutional leadership to take a step forward
- As a research information management community we need the cross-institutional & international collaboration attitude that libraries carry in their genes
- Specific training is required in the field of research information management (euroCRIS may be able to help with that)
- Library professionals need further empowerment in the region
